

1 **ABSTRACT**

2 The present invention discloses a system and method
3 for placing orders utilizing barcode scanning technology.
4 A user of the system utilizes a barcode scanner to scan the
5 barcodes for all the objects the user wishes to order. The
6 user then uploads this information to a computer. A
7 software application located on the computer parses the
8 information and assigns each scanned product to a vendor
9 based upon the user's predetermined preferences. The
10 application then launches a browser with a populated
11 shopping cart at each vendor's e-commerce website. The
12 user can then utilize the different e-commerce websites to
13 complete the ordering transaction.
